Calculate Total, Average and Division

A) Code

```
marks=list(map(int, input().split()))
total = sum(marks)
average = total/len(marks)
print(total)
print(f"{average:.2f}")
if average >=85:
        print("Distinction")
elif average >= 60:
        print("First Division")
elif average >= 50:
        print("Second Division")
elif average >= 40:
        print("Third Division")
else:
        print("Fail")
```
